White gloss cast vinyl featuring a permanent repositionable grey solvent-based adhesive. This material has been specifically designed for digital printing on large-format inkjets and is suitable for printing with eco solvent and solvent inks as well as UV-cured inks.

**IP 2507**

Premium cast PVC film, non-migrating plasticizers and UV stabilizers ensuring long-term outdoor durability. Due to its grey adhesive IP 2507 also offers excellent opacity. Featuring a maximum degree of brilliancy and outdoor durability, this material is intended for indoor and outdoor applications such as markings and decorations, vehicle graphics and complete vehicle wrappings. When the material has been applied into convex or concave contours and hence subjected to deformation, it is then imperative that post-heating is carried out. Heat up the vinyl evenly over the contours at a temperature of 100°C. For best results use an infrared thermometer for accuracy. Laminate: IP 2800-100, IP 2800-101 or ImagePerfect™ water-based liquid laminate with UV protection.

### Specifications
