Product Information

Application Tape based on a special impregnated paper with low tensile strength and high wet stiffness, coated with an Ageing- and UV-stabilised natural rubber with high tack.

Suitable for transferring self adhesive letters produced from cast and calendered PVC colored films according to CAD/CAM techniques, as well as films with a rough surface like etch glass and other effect films.

Especially to be emphasised are the following properties:

- The natural rubber adhesive guarantees an excellent adhesion on PVC films because of the relatively high coating weight.
- The impregnated carrier paper shows an excellent stability of shape, and can also be used for wet applications.
- The Application Tape can be rewound easily from the roll.
