Product Information

POLI-MOUNT 385 is based on an UV-cross-linked, closed-cell polyethylene foam, laminated on both sides with a solvent acrylic adhesive. The adhesive offers an excellent resistance against ageing and temperature. The liner made by a siliconized polyethylene film (green) grants protection of the adhesive against all weather conditions.

Especially to be emphasised are the following properties:

- The high grade solvent acrylic adhesive offers a high initial tack which guarantees an easy mounting under industrial conditions. Mounting of displays, product samples, plates and screens.
- The adhesive experiences a major increase of adhesion within the first 48 hours, and will reach a firm and solid final adhesion even under the influence of high temperatures and humid conditions.
- The permanent elastic and compressible PE-foam carrier is suitable for rough and uneven surfaces which contribute to an increase of the final adhesion strength.

Technical Data

- **Carrier:** PE-foam
- **Adhesive:** Acrylic
- **Liner:** PE-film, green
- **Adhesion [N/cm]:** 4.20 +/- 10 %
- **Thickness [mm]:** 1.00 +/- 5 %
- **Temperature resistance [°C]:** -40 / +80

Standard Dimensions

1.250 mm x 50 m

Safety Datasheet

MSDS have not been prepared for these products, they are not subject to the MSDS requirements of the Occupational Safety and Health Administrations Hazard Communication Standard, 29 C.F.R.1910.1200 (b)(6)(v).

When used under reasonable conditions and in accordance with the Poli-Tape directions for use, these products do not present a health and safety hazard. However, use or processing of the products in a manner which is not in accordance with the directions for use may affect their performance and present potential health and safety hazards.
